We do not recommend you to trade as soon as the market opens. Wait for at least 15-20 minutes before entering into a trade. If you are new to futures trading you can start off by trading the Index futures like NSE50. However if you would like to trade stock futures always trade stock futures with the highest **A. Vol**.

Always trade in the direction of the current market trend. If the current market trend is 'BULLISH' trade securities that are marked "BULLISH" under the "Trend" column. Alternatively if the current market trend is "BEARISH" trade securities that are marked "BEARISH" under the "Trend" column.

You can identify the current market trend by observing the BSE SENSEX and the NSE 50 NIFTY during market trading hours. If they are both above their previous day's close and rising then the current market trend is BULLISH. Alternative if they are both below their previous day's close and falling then the current market trend is BEARISH.

Avoid trading stock futures on days when their results, etc are being declared.

Terminology

Security Name: This is the name of the near (current) month futures contract.

Close: Last closing price of the near (current) month futures contract.

Trends:

There are two kind of trends, BULLISH or BEARISH.

BULLISH: A bullish trend exists when we have rising prices.

BEARISH: A bearish trend exists when we have falling prices.

Time Periods of Trends:

Medium: Medium term trends typically last for weeks to months.

Short: Short term trends typically last for days to weeks.

RS(Relative Strength): The RS indicates how a security is performing relative to the other securities in the market. A positive reading indicates that the price of the security is rising faster (outperforming) than the overall market. A negative reading indicates that the price of the security is falling faster (underperforming) than the overall market. A neutral reading (0) indicates that the security is moving in tandem with the overall market. After the identifying the direction of the trend the RS is one of the most valuable tool for any trader or investor. Preferably go long in securities with a RS reading >0 and short in securities with a RS reading <0. RS applies mainly to stocks and not indices.

OI (Open Interest): Open interest measures the flow of money into the futures market. The higher the open interest the greater is the flow of money and a confirmation of the trend. To make it easier for you to compare open interest across different securities we have modified the open interest to fluctuate between 0 to 100. Preferably trade futures contracts with the highest OI.

A. Vol: This is the daily average volume (number of contracts traded) calculated over the last five trading days. A. Vol is a measure of intensity or pressure behind a price trend. The greater the volume the more we can expect the existing trend to continue rather than reverse. Preferably trade futures contracts with the highest A. Vol.

TRADING SIGNALS

Signal: A **BUY** signal indicates that the short term trend has changed from BEARISH to BULLISH. It also indicates that you can go long by buying the near month futures contract at or near the price mentioned in the "Close" column. Alternatively a **SELL** signal indicates that the short term trend has changed from BULLISH to BEARISH. It also indicates that you can go short by selling the near month futures contract at or near the price mentioned in the "Close" column.

Buy Above: This is the price above which you can go long. If a futures contract opens below the "Buy Above" price, do not go long. Wait for the futures contract to trade above the "BuyAbove" price before going long.

Sell Below: This is the price below which you can go short. If a futures contract opens above the "Sell Below" price, do not go short. Wait for the futures contract to trade below the "Sell Below" price before going short.

Stop Loss: This is a close only stoploss. Once long or short in a trade, use the "Stop Loss" level to close your position. The "Stop Loss" changes every day and moves in the direction of the profitable trend. If you cannot afford to lose the amount difference between your entry price and stoploss level, please do not take the trade. Ideally your maximum risk per trade should not exceed 1-2% of your entire trading capital.

Previous Signal: This indicates whether the previous SIGNAL was a BUY or SELL.

Days Since: Number of trading days since the "Previous Signal" was triggered.

% Return: Indicates the % Return (Profit or Loss) since the Previous Signal was triggered.

1Target, 2Target, 3Target, 4Target: These are the indicative levels where you can book profits once you are long or short in a trade.

Profit Taking: One can book profits once the security reaches any of the Target levels mentioned above. If you have a large position, we suggest you to scale your profit taking by closing out 1/4 of your position at 1Target, 1/4 of your position at 2Target, and so on...

How to Select the most profitable futures contract for Long BUY Signals

Preferably trade in the same direction of the medium term trend.

When you get a BUY in the "Signal" column or a value in the "Buy Above" column, select the futures contract in which at least 4 out of the following 5 conditions are met:

BULLISH Medium Term Trend + BULLISH Short Term Trend + Positive RS + Highest OI + Highest A. Vol

How to Select the most profitable futures contract for Short SELL Signals

Preferably trade in the same direction of the medium term trend.

When you get a SELL in the "Signal" column or a value in the "Sell Below" column, select the futures contract in which at least 4 out of the following 5 conditions are met:

BEARISH Medium Term Trend + BEARISH Short Term Trend + Negative RS + Highest OI + Highest A. Vol
